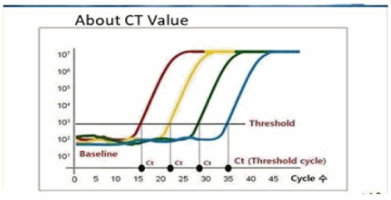
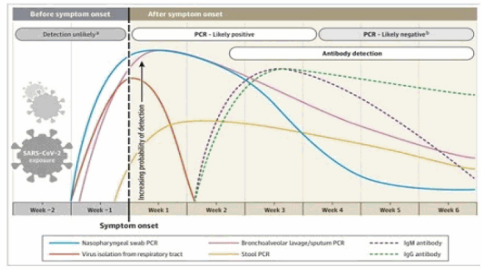
| SARS COV 2 (Covid 19)<br>*(Method: REAL TIME POLYMERASE CHAIN REACTION - RT PCR)* | NEGATIVE | | |
| CYCLE THRESHOLD VALUE (CT Value)<br>*(Method: Derived)* | 39 | . | Greater than > 35 : NEGATIVE<br>Less Than < 35 : POSITIVE<br>CT value is only informative and have no diagnostic importance. |

MEDCIS PATHLABS ICMR REGISTRATION NUMBER: MPIH001
BELOW INFORMATION IS ONLY INFORMATIVE NOT FOR CLINICAL INTERPRETATION

**NOTE:** *The RT-PCR test presently being conducted is qualitative in nature. Ct values may give a rough estimate of viral load. There are no reliable studies to definitively prove a direct correlation between disease severity / infectiousness and Ct values. Viral load does not have much role in patient management.*

Ct levels are inversely proportional to the amount of target nucleic acid in the sample (i.e. the lower the Ct level the greater the amount of target nucleic acid in the sample).The CT value represents the first cycle during testing in which a detection occurs.





Ct values differ from kit to kit, lab to lab, Collection Process and transportation conditions and other factors.
